AKHILESH BASHETTIWAR

Senior Software Engineer | AI & Automation Engineering | Java | React

Hyderabad, India | +91 990 88688 21 | akhi9195@gmail.com

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years of experience spanning software development, quality engineering, test automation, API automation, CI/CD, and AI-assisted engineering. Hands-on experience with Java, React.js, Playwright, Selenium, REST APIs, Jenkins, Spring/Spring Boot, and SQL, with recent focus on AI-driven engineering workflows and production AI agents.

Experienced in developing frontend applications using React.js and ServiceNow Seismic, building Java-based automation frameworks and engineering tools, developing REST API automation solutions, and contributing to end-to-end software development activities. Built AI-assisted workflows capable of generating 300+ framework-compliant Playwright automation scripts, adopted by QE engineers.

Developed and deployed two production AI agents for ServiceNow Instance Observer using the Now Assist Platform (NAP) and agent orchestration: an AI-powered knowledge assistant for application help and an action-oriented agent for managing monitoring alerts.

CORE TECHNICAL SKILLS

Programming: Javascript, Typescript, Java, J2SE, J2EE, JavaScript, Python (basic)
Frontend: React.js, ServiceNow Seismic, HTML5, CSS3, Redux, React Hooks, Context API, React Query, Routing, Forms, API Integration, Component Architecture, State Management
Backend & APIs: Spring, Spring Boot, REST APIs, Spring MVC, Hibernate, JDBC, Apache HttpClient, REST Assured
AI & Engineering Automation: AI Agents, AI Workflows, AI-assisted Software Engineering, Windsurf, Now Assist Platform (NAP), Agent Orchestration, Knowledge Base Retrieval, AI-driven Test Automation, AI-driven Failure Analysis
Test Automation: Playwright, Selenium WebDriver, TestNG, JUnit
CI/CD & DevOps: Jenkins, Git, Maven, Ant, CI/CD
Databases: SQL, PostgreSQL, Oracle, MongoDB
Testing & API Tools: Postman, SOAP UI, Curl, Rest Client
Frameworks & Technologies: Struts, Spring, Hibernate, Servlets, JSP, XML, JSON, jQuery, AJAX

PROFESSIONAL EXPERIENCE

ServiceNow

Senior Software Engineer **| October 2022 – Present**

ServiceNow Instance Observer (IO)

- Worked across software development, AI engineering, automation engineering, and quality engineering, with increasing responsibility for software development and AI-driven engineering initiatives.
- Developed and deployed two production AI agents for the Instance Observer application using the Now Assist Platform (NAP) and agent orchestration.
- Developed IO Help Agent, which handles application-related user questions by retrieving relevant information from the Instance Observer Knowledge Base based on the user's request.
- Developed IO Alert Toggle Agent, an action-oriented agent that processes user requests to pause, resume, enable, or disable monitoring alerts, executes the requested operation, and returns the result through the IO Agent Orchestrator.
- Developed AI-assisted workflows for generating test automation from acceptance criteria, feature context, validation test cases, and locators. The workflow leverages the existing Playwright framework and utilities to generate framework-compliant automation scripts ready for execution.
- Enabled generation of 300+ automation scripts through the AI workflow, which was adopted by other QE engineers.
- Developed an AI-powered failure-analysis agent that analyzes complete team-level test execution reports and logs against historical error buckets to identify probable root causes and generate failure analysis.
- Built reusable AI engineering workflows using Windsurf, including custom rules, reusable prompts, workflows, agents, project-context integration, code generation, debugging support, and documentation generation.
- Delivered demonstrations of AI-powered automation workflows to the QE organization.

- Developed frontend UI functionality for the Instance Observer application using the ServiceNow Seismic framework, with AI-assisted development through Windsurf.
- Participated in end-to-end Epic development, from requirements and implementation through testing and merge into the master repository.
- Developed a Spring Boot/Java REST endpoint as part of the application development work.
- Collaborated with technical leads and stakeholders to understand requirements, implement features, troubleshoot issues, and deliver production-ready changes.
- Developed and enhanced Java-based automation framework components using Playwright.
- Developed an API automation framework using Java and Apache HttpClient.
- Onboarded APIs into reusable utility components to improve framework reuse.
- Enhanced customized automation reporting based on project requirements.
- Contributed to continuous framework improvements and automation reliability.
- Maintained and executed automation across experimental, stable, and production environments.
- Performed regression testing, failure analysis, defect investigation, and quality validation for application releases.

Apple Online Store — TCS

Senior Software Engineer **| March 2021 – October 2022**

Internal Microservices Health Dashboard / EVA

Technology: React.js, JavaScript, HTML5, CSS3, Bootstrap, Java, Spring, SQL, PostgreSQL, Selenium, Jenkins, Postman, Apache HttpClient, JUnit, Maven

- Designed and developed frontend UI for EVA, an internal microservices health and monitoring dashboard, using React.js without AI-assisted development.
- Developed reusable React components and application functionality using React Hooks, Context, React Query, Redux, routing, forms, API integration, component architecture, and state management.
- Collaborated with technical leads and managers to translate requirements and UI/UX designs into functional frontend features.
- Developed reusable code and libraries with maintainability and scalability in mind.
- Integrated frontend components with backend services and APIs.
- Collaborated with backend developers and other engineering stakeholders to troubleshoot issues and improve application usability.
- Worked on application performance, maintainability, and scalability improvements.
- Participated in development, testing, debugging, and delivery of planned features.

Oracle India Pvt. Ltd.

Software Engineer **| December 2016 – February 2021**

Oracle Textura Construction Management

Technology: React JS, Java, Spring Boot, Selenium, Jenkins, REST Assured

- Developed and maintained responsive, user-friendly web applications using React.js, Java, and Spring Boot.
- Designed, developed, and enhanced RESTful APIs to support frontend functionality and business requirements.
- Implemented backend business logic and service-layer components using Java and Spring Boot.
- Integrated React frontend components with backend REST APIs to ensure seamless data flow and application functionality.
- Troubleshot, debugged, and resolved application defects to improve system reliability and performance.
- Collaborated with product managers, QA engineers, and cross-functional teams to understand requirements and deliver software enhancements.
- Participated in code reviews and followed coding standards, best practices, and established software development guidelines.
- Wrote and maintained unit tests to ensure code quality and minimize regressions.
- Analyzed existing application workflows and implemented enhancements to improve maintainability and user experience.

- Participated in Agile/Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives.
- Supported application releases and production issue resolution, ensuring application stability and reliability.

WellsFargo

Senior Quality Analyst **| June 2014 – December 2016**

Offers Module — WWW Banking Application

Technology: Java, Selenium, Jenkins, REST Assured, TestNG, Maven, JDBC

- Developed reusable utility classes using Core Java and JDBC for the Offers application.
- Designed and developed reusable automation framework using Selenium library which later used by other teams as well.
- Executed and analyzed a 2,000+ test-case regression suite at regular intervals.
- Performed functional, regression, integration, and API testing.
- Investigated failures and reported defects using the ClearQuest defect management system.
- Collaborated with development and QA teams to validate application functionality and resolve defects.
- Received the Achieving Excellence Award for commitment and contribution.

KEY ACHIEVEMENTS

- Built and deployed 2 production AI agents for ServiceNow Instance Observer using Now Assist Platform and agent orchestration.
- Built an AI-assisted automation workflow capable of generating 300+ framework-compliant Playwright automation scripts, adopted by other QE engineers.
- Built an AI-powered failure-analysis workflow using historical error buckets to identify probable root causes from team-level execution reports.
- Developed multiple Java-based internal engineering tools from scratch to improve automation execution and test management.
- Developed frontend functionality for an internal React-based microservices health dashboard at Apple.
- Developed reusable API automation utilities and framework components using Java and Apache HttpClient.
- Received the Lama Award at ServiceNow, Achieving Excellence Awards at Wells Fargo and Oracle, and the SPOT Award at Oracle for performance, commitment, and innovative work.

EDUCATION

Bachelor of Technology — Electronics & Communications Engineering

Arkay College of Engineering, India | Graduated May 2011
